

## SUMMARY

Senior Cloud Engineer with **3+ years** of experience leading end-to-end AWS migration and modernization, delivering projects of 50 to **500+ servers** in a **single engagement**. Migrated diverse workloads (stateful and stateless applications, databases, and containerized services) from on-premises data centers and Google Cloud Platform to secure, cost-efficient AWS architectures using **rehost, replatform, and refactor** strategies. Use **Bill of Materials (BoM)**-driven planning, covering workload inventory, dependency mapping, **rightsizing**, and **cost estimation**, to reduce infrastructure costs by **30%** and keep **cutover downtime** under 30 minutes per workload. Deep expertise in **Amazon EKS, Terraform IaC, ArgoCD GitOps**, and **OPA policy-as-code**. Built and operated **CI/CD** systems handling **50+** daily deployments, **reducing deployment failures by 90%** and sustaining **99.9% uptime**.

## KEY SKILLS

**Cloud Migration & Modernization:** AWS Migration (Rehost, Replatform, Refactor), AWS Application Migration Service (MGN), AWS Database Migration Service (DMS), AWS Migration Hub, Bill of Materials (BoM) Planning, Workload Assessment & Rightsizing, Wave-Based Cutover Planning, Zero/Low-Downtime Cutovers, Cost Optimization (Savings Plans, Reserved Instances), On-Prem to AWS and GCP to AWS Migration, GKE to EKS Migration

**AWS Cloud Services:** EC2, VPC, IAM, S3, RDS, EKS, ECR, Lambda, CloudWatch, Route 53, ALB/NLB, KMS, Secrets Manager, CloudFormation, CodeBuild, Control Tower

**Networking & Connectivity:** Site-to-Site VPN, Direct Connect, Transit Gateway, Nginx, Istio

**Containers & Orchestration:** Kubernetes (Amazon EKS), Docker, Helm, ArgoCD, Karpenter

**Infrastructure as Code & Automation:** Terraform, Ansible, CloudFormation, Python, Shell Scripting

**CI/CD & GitOps:** Jenkins, GitHub Actions, GitLab CI, Maven, Git, GitHub, GitLab, GitOps

**Observability:** Prometheus, Grafana, ELK Stack, CloudWatch

**DevSecOps & Governance:** OPA Gatekeeper, Trivy, DevSecOps Pipelines, Policy-as-Code, IAM Least-Privilege Design

## EXPERIENCE

**Access Tech System | Senior Cloud Engineer | On Site | Jul 2026 – Present**

- Led end-to-end **AWS migrations** of **50 to 500+** servers per project, moving **stateful** and **stateless** applications, **databases**, and **containerized** workloads from **on-premises data centers** and **GCP** using **rehost, replatform, and refactor** strategies.
- Built a **Bill of Materials (BoM)** for each migration covering server inventory, dependency mapping, sizing, and **AWS cost projections**, then rightsized compute and storage to reduce infrastructure **costs by 30%**.
- Executed wave-based **cutovers** with **pre-validated rollback plans**, keeping **downtime** under **30 minutes** for **application workloads** and under 2 hours for databases.
- Migrated GKE workloads to **Amazon EKS**, re-architecting deployments with **Helm** and **ArgoCD** and replacing GCP-native dependencies with AWS equivalents.
- Provisioned **VPCs, IAM roles, EKS clusters**, and supporting infrastructure through **reusable Terraform modules**, making every migrated environment repeatable and auditable.
- Automated server configuration, **data transfer**, and validation tasks with **Ansible, Python, and Shell scripting**, cutting manual effort across migration waves.
- Embedded OPA Gatekeeper policies and Trivy scanning into migration pipelines so migrated workloads met security baselines before go-live.

**Intellipaat | Cloud Engineer | On Site | Jul 2023 – Jul 2026**

- Designed and managed **scalable cloud infrastructure (AWS + Kubernetes EKS)** across multi-environment setups (dev, staging, production), ensuring **99.9% availability**
- Led **Kubernetes cluster operations**, including **troubleshooting, performance tuning, and capacity planning (cluster sizing)** for microservices workloads
- Implemented **auto-scaling strategies using HPA and cluster autoscaler**, improving resource utilization and enabling zero-downtime deployments
- Built and integrated **enterprise monitoring solutions (Prometheus, Grafana, ELK)** with custom alerting, improving system visibility and reducing MTTR by **40%**
- Developed **Infrastructure as Code using Terraform** to provision and manage **75+ cloud resources**, enabling repeatable and scalable infrastructure
- Contributed to **infrastructure architecture decisions**, including deployment strategies, networking design (VPC, subnets, security groups), and high-availability setups
- Supported **distributed system deployments and monitoring (ELK stack, message-driven architectures)**
- Drove **CI/CD automation (Jenkins, GitHub Actions, GitLab CI)**, reducing deployment time by **60%** and failures by **90%**
- Implemented **DevSecOps practices (OPA, Trivy)** ensuring compliance, vulnerability management, and secure deployments
- Collaborated with cross-functional teams to **translate business requirements into technical solutions and deployment strategies**
- Mentored junior engineers and guided teams in **DevOps best practices, CI/CD adoption, and Kubernetes usage**

## PROJECTS

---

### Python Flask CI/CD Pipeline

- Built end-to-end CI/CD pipeline with Jenkins and GitHub Webhooks covering 4 repos automated build, test, Docker image creation, and Docker Compose deployment stages
- Eliminated manual deployment steps across all repos, reducing deployment errors by **90%** and cutting release time from ~2 hrs to under 20 min

### Dockerized Web App with PostgreSQL

- Containerized Flask and PostgreSQL app with Docker for production use configured persistent volumes and isolated bridge networking for data durability and security
- Standardized deployment process across local and production environments, eliminating environment-specific failures and ensuring fully reproducible builds

### Swift DevOps Integration

- Rolled out org-wide DevOps lifecycle across 4 teams using Jenkins, Ansible, and Git standardized CI/CD pipelines and Git branching strategy (GitFlow) across all teams
- Reduced deployment errors by **85%** and eliminated ad-hoc release processes, cutting average release coordination time by ~60%

### Automating Monthly Releases with Kubernetes

- Orchestrated 2 production applications using Kubernetes and Helm implemented zero-downtime rolling deployments with automated rollback on failure
- Streamlined monthly release cycles via Jenkins and AWS CodeBuild; added Prometheus and Grafana dashboards reducing release-night incident detection time by **40%**

### Ansible 3-Tier AWS Deployment

- Automated full 3-tier (Nginx → Flask → MySQL) deployment across **8 EC2 instances** using Ansible playbooks configured secure VPC networking, security groups, and inter-tier communication
- Delivered fully idempotent infrastructure any tier re-provisionable in under 10 min with zero manual steps

## CERTIFICATIONS

---

[AWS Cloud Migration from AWS](#) | Amazon Web Services | July 2026 |

[AWS Transform from AWS](#) | Amazon Web Services | July 2026 |

[AWS Solution Architect from AWS](#) | Amazon Web Services | April 2025 |

## EDUCATION

---

Government Engineering College, UP, India | GPA: 8.5 |

*Bachelor of Technology – Computer Science and Engineering*

- Head Coordinator, Technical Club: Led a team of 100+ members, organized 15+ technical events/hackathons with 200+ participants awarded for exceptional leadership.
